

VARUN KUMAR J A

DevOps Engineer · Software Developer

+91 9148728776 | varunjavali07@gmail.com | [LinkedIn](#) | github.com/varunjavali | [Portfolio](#) | Bengaluru / Davangere, KA

PROFESSIONAL SUMMARY

Results-driven **DevOps Engineer and Full-Stack Developer** pursuing MCA at VTU (2026) with proven experience deploying **cloud-native microservices on AWS EKS** using Terraform, Kubernetes, and Jenkins CI/CD. Engineered **5+ production-grade systems** spanning Flutter mobile apps, full-stack web platforms, and AI-powered tools. Combines deep infrastructure automation expertise with strong software engineering fundamentals to ship systems that are **secure, observable, and built to scale**.

CORE COMPETENCIES

- | | | |
|--|---|--|
| ▪ Cloud & IaC: AWS EKS · EC2 · S3 · IAM · RDS · Terraform | ▪ Containers: Docker · Kubernetes · Helm · Nginx | ▪ CI/CD: Jenkins · GitHub Actions · SonarQube · Nexus |
| ▪ Observability: Prometheus · Grafana · Log Monitoring | ▪ Automation: Ansible · Terraform Modules · Bash | ▪ Backend: Node.js · PHP · REST API |
| ▪ Frontend/Mobile: Flutter · React.js | ▪ Databases: PostgreSQL · MySQL · MongoDB · Firebase | ▪ Languages: Python · Dart · JavaScript · PHP · Java |

PROFESSIONAL EXPERIENCE

Vtricks Technologies

DevOps Engineer Intern

2026

Bengaluru, Karnataka

- **Architected** end-to-end cloud infrastructure on **AWS (EC2, S3, IAM, RDS, EKS)** using **Terraform modules** (IaC), eliminating manual provisioning and reducing environment setup time by **~70%** across the team.
- **Engineered** a production-grade **Kubernetes** deployment strategy — Pods, Deployments, Services, and Ingress — containerizing **5+ microservices** with Docker and orchestrating zero-downtime rollouts on AWS EKS.
- **Delivered** a fully automated **Jenkins CI/CD pipeline** integrated with GitHub, reducing manual deployment effort by **80%** and enabling consistent, repeatable builds across all environments.
- **Implemented** DevSecOps practices — integrating **SonarQube** for static code analysis and **Nexus** for artifact management — enforcing quality gates before every production deployment.
- **Established** full-stack **observability** using **Prometheus + Grafana** dashboards, enabling real-time performance monitoring and cutting incident response time by **~50%** through proactive alerting.
- **Automated** configuration management across multiple environments using **Ansible** playbooks, ensuring consistent, drift-free infrastructure.

KEY PROJECTS

Shopwave — Microservices E-Commerce Platform · AWS EKS · Terraform · Kubernetes · Docker · Node.js · Go · React · MongoDB

- **Designed** a production-ready **microservices architecture** (Auth, Products, Orders, Payments, Notifications) deployed on **AWS EKS** — fully provisioned via **Terraform** (VPC + EKS modules), containerized with Docker, and routed via Nginx API Gateway.
- **Delivered** a React + Redux frontend with complete checkout flow, connecting to **5 independent backend services** via REST API — demonstrating end-to-end full-stack ownership.
- **GitHub Repository:** <https://github.com/varunjavali/shopwave>

VCart — Full-Stack eCommerce System (User App + Admin Panel) · Flutter · Firebase · Firestore · Provider · Google Auth · OpenStreetMap

- **Built** a dual-app eCommerce system sharing a single **Firebase/Firestore** backend — User App with Google Auth, cart (Provider state management), coupon engine, **wallet + cashback system**, real-time order tracking, and OpenStreetMap address picker.

- **Engineered a Flutter Windows desktop Admin Panel** with live Firestore streams, full product/order/user management, and real-time order status pipeline (pending → shipped → delivered).

LSM — Learning Management System · Node.js · Express · Prisma ORM · PostgreSQL · React · Vite · Tailwind CSS · JWT 2024

- **Architected** a full-stack LMS with **Role-Based Access Control (RBAC)** for Admin, Trainer, and Student roles — JWT session auth, protected routes, course management, and per-video watch progress tracking.
- **Delivered a Prisma ORM + PostgreSQL** backend with a React/Vite/Tailwind frontend — production-structured with migrations, schema versioning, and a clean REST API layer.

EduSense Gate — Smart Attendance System · Python · Streamlit · Flask · SQLite · Wi-Fi Network Scanning

- **Automated** student attendance tracking by engineering a **Wi-Fi device-scanning** engine that detects authorized devices on the network in real time — eliminating manual roll-call entirely.

DeepFake Detection System · Python · XceptionNet · EfficientNet-B4 · MesoNet · FFT Analysis

- **Developed an ensemble deep learning classifier** (XceptionNet + EfficientNet-B4 + MesoNet) augmented with FFT frequency analysis — achieving high-confidence detection of AI-generated media.

EDUCATION

UBDT College of Engineering, Davangere · Visvesvaraya Technological University (VTU) 2024 – 2026

Master of Computer Applications (MCA) — Currently Pursuing

Davangere University, Karnataka

Aug 2023

Bachelor of Computer Applications (BCA), Honors — CGPA: **8.1 / 10**

CERTIFICATIONS

- | | |
|---|------|
| ▪ DevOps Engineering Internship Certificate — Vtricks Technologies | 2026 |
| ▪ DevOps Tools — Simplilearn | 2026 |
| ▪ JavaScript (ES6+) — Simplilearn | 2026 |

ADDITIONAL

- **Languages:** Kannada (Fluent) · English (Fluent) · Hindi (Conversational)
- **Availability:** Immediate Joining · On-site & Remote · Open to Relocation
